The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawasaki et al in view of either Pappis et al or Ishii et al, for the reasons given in the Office Action of March 1, 2006. Applicants' argument, that the claimed invention specifically recites that the process comprises a preheat step of 2 hours or until about 80 weight percent of the initial starting weight is volatilized, is not convincing, since Kawasaki et al disclose at col. 13, lines 1-4 that the mixture was continuously calcined by means of a screw conveyor furnace so that it passed through a heating zone at a temperature of 800 C in an ammonia atmosphere over a period of 2 hours.
